Professional summary

Backend-focussed Full Stack Java Developer with 3.5 years of experience building scalable enterprise applications using **Java, microservices architecture, and modern frameworks**. Experienced in developing **RESTful APIs and web applications using ReactJS**. Skilled in **CI/CD pipelines, containerization, and cloud deployments**, with hands-on experience in **Open Liberty and Spring-based systems**. Proven ability to deliver secure and high-performance solutions in Agile environments.

Technical Skills

Programming Languages: Java
Frameworks & Libraries: Spring Boot, Spring MVC, Microservices Architecture, ReactJS, Spring Security, JWT Authentication, MicroProfile
Web & API Technologies: RESTful APIs, JSON
Databases: MySQL
DevOps & Tools: Docker, Kubernetes, Jenkins, GitHub Actions, GitLab CI/CD, Maven, Gradle, Git
Cloud Platforms: Google Kubernetes Engine (GKE), AWS (EC2)
Testing: JUnit, Mockito
Other: API Gateway, Distributed Systems, Agile Methodology, CI/CD Pipelines

Work Experience

Java Developer

Tata Consultancy Services (Hyderabad) 01/2025 to Present

Project: Legacy Insurance Application Modernization (Client: USAA)

- Modernized legacy insurance applications by migrating **JSP/Servlet-based modules to microservices using Open Liberty and MicroProfile**, improving maintainability and scalability.
- Refactored monolithic components into 15+ loosely coupled **microservices** enabling independent deployment and faster release cycles.
- Designed and developed **RESTful APIs using Java 21 and MicroProfile specifications (JAX-RS)** for communication between distributed services, **improving API response performance by 30%**.
- Analyzed and reverse engineered legacy codebase to **extract reusable business logic** and support microservices transformation.
- Contributed to **CI/CD pipeline implementation using GitLab CI/CD with Gradle-based builds**, enabling automated build, testing, and deployment workflows.
- Ensured code quality and reliability by implementing **unit testing (JUnit, Mockito) and static analysis using SonarQube**.
- Leveraged **AI-assisted development** tools (e.g., GitHub Copilot) to accelerate code generation, debugging, refactoring, and test creation, **reducing development time by ~25%** and improving issue resolution speed.

Full Stack Java Developer

LeadIcon Technologies Pvt Ltd. (Bengaluru – remote) 08/2024 to 10/2024

Project: Sales Route and Activity Management System

- Developed 20+ **RESTful APIs using Spring Boot** for tracking sales activities, route management, and customer interactions.
- Implemented **JWT-based authentication and Spring Security,** ensuring secure and role-based data access across multiple organizations.
- Designed and optimized **MySQL database schemas, queries, and stored procedures**, improving data retrieval performance.
- Deployed application on **AWS EC2 with load balancing and auto-scaling**, ensuring high availability and scalability.
- Collaborated with frontend teams to **integrate ReactJS UI with backend APIs**, enabling seamless user experience.

Java Developer

Capgemini Engineering (Gurgaon) 12/2021 to 12/2023

Project: Billing System for Hughes Network Systems

- Developed backend modules using **Java and enterprise technologies** for customer account management, invoicing, and payment processing.
- Designed and maintained **REST APIs and backend services for system integration across multiple enterprise modules**.
- Optimized **SQL queries and database operations**, improving performance and data processing efficiency.
- Supported **CI/CD pipelines and version control using Git**, enabling efficient code integration and deployment.
- Collaborated with cross-functional teams to **analyze requirements and deliver scalable backend solutions**.

Personal Projects

Project: E-commerce Microservices Web Application 01/2024 to 06/2024

- Built a **scalable microservices-based e-commerce platform supporting authentication, product management, and order processing workflows**.
- Designed and developed backend services using **Spring Boot**, following distributed system architecture principles.
- Developed a responsive frontend using **ReactJS**, integrating APIs for catalog, cart, and checkout workflows.
- Implemented **JWT-based authentication and API Gateway routing** for secure and efficient request handling and designed for scalability using stateless services and load balancing
- Containerized services using **Docker and deployed on GKE**, ensuring high availability and scalability.
- Automated CI/CD pipelines using **GitHub Actions**, enabling faster and reliable deployments.

Education

Rajeev Gandhi Memorial College of Engineering & Technology, Nandyal.

B. Tech - Electronics and Communications Engineering 07/2017 to 07/2021
